SACHIN CHOUDHARY

Senior Full Stack Engineer

Senior Full Stack Engineer with 5+ years shipping production systems at scale across CRM, outreach, and fintech platforms. Built LLM-powered conversational AI and RAG pipelines serving 30+ clients, automated pipelines that cut manual ops by 60%, and re-architected sync layers for 10x throughput. AI-native engineer leveraging Claude Code, MCP, and agentic workflows to ship 40%+ faster.

SKILLS

Python / Go
Django REST Framework / FastAPI
Node.js / Express.js
TypeScript / JavaScript
React.js / Next.js
WebSockets
PostgreSQL / MySQL / MongoDB
Redis / Celery / RabbitMQ
AWS (EC2, S3, RDS)
Agentic AI / LLM Orchestration
RAG Pipelines
Vector DBs (Milvus, pgvector)
MCP (Model Context Protocol)
Claude Code / Cursor
Metabase / Redash
Product Management

EDUCATION

B.Tech in Electronics and Communication Engineering
NIT Uttarakhand
2017 - 2021

WORK EXPERIENCE

Senior Software Engineer
Jan 2025 - Present
Verbaflo.AI - Gurgaon

- Designed and shipped **Campaigns** end-to-end — a multi-channel broadcast platform (WhatsApp, SMS, email, voice) where **LLM agents** handle interactive follow-ups across payment reminders, lead follow-ups, late-payment recovery, and marketing flows; powers **30+ clients** within a year of launch and saved clients ~70% of agent hours.
- Built a **RAG pipeline** on **Milvus** to answer general FAQs in conversational AI flows, grounding responses in client knowledge bases and cutting LLM hallucinations on FAQ queries by ~80%.
- Led the **Property Management System pod**, owning integrations with Yardi, Entrata, MRI, RealPage, and 6+ providers; drove client conversations to secure API access and powered AI-grounded property recommendations.
- Built an **agentic dev workflow with Claude Code** that pulls assigned ClickUp tickets, drafts implementation plans from descriptions and comments, ships PRs after passing tests, and triggers deploys with human-in-the-loop checkpoints — saving **~40%** of dev cycle time per ticket; optimized LLM cost via graph-based context retrieval.
- Re-architected multi-client data synchronization with batch processing and event-driven updates, achieving a **10x** performance improvement in data refresh cycles.
- Built automated operations pipeline with **Python + Celery**, orchestrating critical workflows that eliminated **60%** of manual intervention across business functions.

Senior Backend Engineer
Apr 2024 - Jan 2025
ASL Group (UniScholars) - Mumbai

- Built **event-driven** workflow engine for lead management with Node.js, automating WhatsApp follow-ups and targeted campaign orchestration — improved lead-to-conversion response time by ~50%.
- Shipped admin-configurable workflow builder with **React.js**, enabling non-technical teams to create custom lead nurturing logic and reducing dev tickets for campaign changes by ~70%.
- Optimized **MySQL** and **PostgreSQL** with query tuning, indexing, and schema refactoring, cutting p95 API response times by ~45%.
- Acted as Product Manager for key initiatives — gathered requirements, drove sprint planning, and owned delivery timelines.

Backend Engineer
Apr 2023 - Mar 2024
ASL Group (UniScholars) - Mumbai

- Architected core backend for CRM and web platform using **Django REST Framework** and Node.js, building production RESTful APIs serving 100K+ requests/day.
- Designed and optimized database schemas, improving query performance by ~3x.
- Managed **AWS** infrastructure (EC2, S3, RDS) with auto-scaling and load balancing, achieving 99.9% uptime.
- Built async task processing with **Celery + Redis**, boosting throughput on long-running jobs by ~4x.

Full Stack Engineer
Apr 2021 - Mar 2023
ASL Group (UniAcco & UniCreds) - Mumbai

- Led backend development and deployments for UniCreds and UniScholars; owned end-to-end delivery — frontend (React.js), backend (Node.js, Django), and CRM integration.
- Integrated ZOOP.ONE, Slack, Facebook, and **Experian** APIs for verification and credit workflows; built a real-time executive sales dashboard in React.js for leadership insights.
